

moonscope [5:08 Min]

[All sounds and instruments performed and played by A. Hammon
Except E-Guitar H. Berner X E-Drums F. Wischka
Voice R. F. Kennedy]

Our forefathers instinctively regarded the Moon as the great bringer of life. Mankind today has forgotten about this old wisdom. Be one step ahead and honor again this rock in the distance that regulates the ebb and flow of our oceans and that, day after day, shows us a familiar face in different states ...

moondance [3:20 Min]

[All sounds and instruments performed and played by A. Hammon]
[Except E-Drums F. Wischka]

As the polar opposite of the Sun, which represents the male power, the Moon is a symbol of feminine energy and of the cyclical nature of life.

The current state of general burn-out is the result of unlimited expansion. We are exploiting the Earth without giving anything back. If we want to survive, we have to take better care of our planet, which gives us life and nurtures us. We have to trust the wisdom of our bodies instead of the intellect which is prone to seduction by the fantasy world of the media.

Celebrate the feminine: the magical, the hidden, the intuitive, the giving, healing and loving aspects. The world is waiting for your contribution!

solar eclipse [4:12 Min]

[All sounds and instruments performed and played by A. Hammon]
[Except E-Guitar H. Berner X E-Drums F. Wischka]

During every front of the Sun. earth, creating a relatively rare event your lifetime to watch

Moon. So whenever it happens close to

Be aware of what happens around you, how nature responds to the sudden darkening.

New Moon, the Moon moves in. Sometimes its shadow falls on the solar eclipse in certain places. This is and there will not be many chances during this special encounter between the Sun and the your home, celebrate this event and go out to watch it.

The Moon tells you that everything is not as it seems. You cannot trust that everything will remain as it is. Life could change from one minute to the next ...

io [4:45 Min]

[All sounds and instruments performed and played by A. Hammon]
[Except E-Guitar H. Berner X E-Drums F. Wischka]

Io is one of the moons of Jupiter. Along with three other moons, it was discovered by Galileo Galilei with a simple telescope in 1610. All these four "Galilean moons" received names from Greek mythology and were identified with consorts of Zeus (who was called Jupiter by the Romans).

Io is the fourth largest moon in our solar system and bigger than our Moon. Its special feature is an extreme volcanism which is unparalleled on any other celestial body in the solar system.

The mythical Io was the daughter of the river god Inachos and was transformed into a cow by the jealous Hera, Zeus' wife. The Ionian Sea is named after Io, as well as the Bosphorus (cow ford) where she crossed on her flight from Hera's rage. As a bridge between orient and occident, between Islam and Christianity, Io still remains a living symbol and an important challenge for mankind ...

europa [5:12 Min]

[All sounds and instruments performed and played by A. Hammon]
[Except E-Drums F. Wischka]

Europa is the smallest of the four Galilean moons of the planet Jupiter. With a diameter of around 3100 kilometers, it is a bit smaller than our Moon but is still the sixth largest moon in our solar system. While the temperature on the surface reaches no more than -150°C , science assumes that there is a huge layer of liquid water below a crust of ice. There might even be life in this ocean, although evidence is still lacking. But our Earth has also been completely covered by ice twice and nature still kept evolving new forms of life under the ice cover.

In Greek mythology, Europa was the daughter of a Phoenician king and was abducted by Zeus in the guise of a bull. He carried her over the Mediterranean Sea to Crete, and the whole continent was named after her. Here, different cultures are merging into something new. The European community is a magnificent experiment with immense potential for new ideas and new ways of life ...

apollo 13 [6:36 Min]

[All sounds and instruments performed and played by A. Hammon
Except E-Drums F. Wischka X Voice NASA]

"Houston, we've had a problem!" Apollo 13 was to be the third manned mission to land on the Moon. But the landing never took place because an oxygen tank exploded two days after the rocket was launched on April 11, 1970. Despite great difficulties caused by limited power, loss of cabin heat, a shortage of potable water, and the necessary modification of the air purification system, the crew returned safely to Earth on April 17. Despite all these adversities it was a record-breaking mission: when the astronauts circled the moon, they reached the farthest distance away from the earth any man has ever come - more than 250.000 miles ...

man on the moon [5:05 Min]

[All sounds and instruments performed and played by A. Hammon]
[Except E-Guitar H. Berner X E-Drums F. Wischika]

"The Eagle has landed." On July 21 in 1969, four weeks before the legendary Woodstock festival, Neil Armstrong was the first man on the moon and uttered his famous quote: "That's one small step for (a) man ... one ... giant leap for mankind." Maybe one day the moon will be the first step in our journey to explore other unknown places in the endless vastness of the universe ...

full moon

[4:51 Min]

[All sounds and instruments performed and played by A. Hammon
Except E-Guitar H. Berner X E-Drums F. Wischka]

Usually the Full Moon is what first comes to mind when talking about the Moon. It is that part of the Moon's cycle when it is in opposition to the Sun and shows its full face without a shadow from the Earth. The lunar cycle and the solar cycle are our two great celestial timers. However, they do not quite match: the lunar year is shorter than the solar year by 11 days so sometimes there are 13 full moons in a year although we only have 12 months.

During Full Moon nights the irrational, "lunatic" side of life takes over and collides with the rational, solar energy. Many people cannot sleep and show a lack of concentration, or they feel dazed and confused. Beware of people who only believe in the rational mind: during the Full Moon they will fall victim to the dark side of the Moon and be confronted with their psychological shadow aspects ...

A lunar eclipse is the mystical trip of our Moon into the shadow cast by the Earth. This happens during a Full Moon when the Earth is positioned between the Sun and the Moon. Before it enters the shadow, the Moon turns red, and after one and a half hours it seems to disappear altogether. After some time of complete darkness a small crescent slowly grows to a full face again, as though a whole month had been condensed into a few hours' time.

Lunar eclipse

the rise of the red moon [5:36 Min]

Usually a red Full Moon happens twice a year, sometimes even three times. Of course, a clear sky is indispensable for observing it. Watch this spectacle alone in a silent place in nature and enjoy the miraculous disappearance and reappearance of the Moon. By the way: a lot of legends are entwined around the "Blood Moon". Take the time to research. It might be interesting ...

titan [4:48 Min]

[All sounds and instruments performed and played by A. Hammon]
[Except E-Guitar H. Berner X E-Drums F. Wischka]

Titan, one of the moons of Saturn, is the second-largest moon in our solar system. It is completely covered with ice and enveloped by a gas cloud. Its atmosphere consists mainly of nitrogen and thus is similar to that of the planet Earth. But it is too far away from the Sun for life to have evolved there.

Titan is characterized by a faint glow in its atmosphere and a great swirl of clouds at the southern pole. Its most important feature is its progressive shrinkage - it is continuously growing smaller ...

ganymede [6:18 Min]

[All sounds and instruments performed and played by A. Hammon
Except E-Guitar H. Berner JK E-Drums F. Wischka]

Moving on a wide elliptical orbit around Jupiter, Ganymede is the largest moon in our solar system and bigger than the planet Mercury. Ganymede shows two different terrains: geologically very old, dark regions with a large number of impact craters and a younger and brighter terrain with distinctive grooves and ridges probably caused by tectonic activity. Together, the dark and the bright side embody the resolution of duality.

In Greek mythology, Ganymede was a beautiful young boy who was abducted by Zeus, in the shape of an eagle, to serve as his cup-bearer. Thus, Ganymede is a symbol for the elevation of the human soul above the earthly plane but also an early model for a homoerotic relationship ...

black moon [4:37 Min]

[All sounds and instruments performed and played by A. Hammon]

The New Moon is that period of the lunar cycle when the Moon is positioned exactly between the Sun and the Earth and is not visible in the night sky. If you go out before sunrise and focus on the east horizon on a clear day just before the New Moon, you may be able to see a very small crescent moving towards the Sun - and away from it again afterwards, when the next cycle is starting. Whenever there is a second New Moon in a month, this is called a "Black Moon".

Our Celtic and Germanic ancestors believed that the Moon was renewing itself during this period of disappearance. They thought it not advisable to start any new projects before the Moon's cycle had started again. So rest and let your feelings flow. Expect nothing and do nothing. Feel the silence around you. Listen for the starting signal which will surely come.
